

**IN THE CLAIMS:**

Sub C4  
7. (Twice Amended) A system for controlling document region analysis, comprising:

analyzing means for analyzing a digital document to determine a number of regions thereon and a data type for each of the regions, the data type for each region being one of a number of predefined data types;

selection means for selecting at least one of the predefined data types for further processing; and

user interface means for displaying the digital document, wherein only ones of the regions that comprise one of the predefined data types selected using the selection means appear in the displayed digital document.

Sub C  
13. (Twice Amended) A method for controlling document region analysis, comprising:

analyzing a digital document to determine a number of regions thereon and a data type for each of the regions, the data type for each region being one of a number of predefined data types;

selecting at least one of the predefined data types for further processing; and

displaying the digital document in a user interface, wherein only ones of the regions that comprise a selected at least one of the predefined data types appear in the digital document displayed in the user interface.

14. (Once Amended) The method of claim 13, further comprising the step of deselecting at least one of the predefined data types.

15. (Once Amended) The method of claim 13, further comprising the step of identifying at least one processing pipeline to process the regions of the digital document based upon a predetermined destination application and the data types selected for further processing.
